HIGHLIGHTS

- A highly adaptable and quick learner who can independently contribute to projects within a short timeframe.
- Led 7 tech teams with over 22 unique members from NUS, UofT, and OCAD University.
- Presented at the 2023 CMS Research Symposium, Applied Research in Action 2023, and Level UP 2023.
- 3.91 average GPA in the last 2 years (3rd & 4th year), including 18 CS courses (3 graduate-level courses).
- North America 2021 IBM Intern Challenge (Hackathon) 2nd Place.

EDUCATION

University of Toronto

November 2023

Honours Bachelor of Science (H.B.Sc.) in Computer Science, with Distinction

Toronto, ON

Specialist (Co-operative) Program, Software Engineering Stream

EXPERIENCE

IBM

May 2021 – August 2022

Software Engineer Intern

Toronto, ON

- Applied DevOps practices by implementing and maintaining CI/CD pipelines with Jenkins for the IBM Wazi Sandbox on OpenShift, enabling quicker and more dependable deployments within the IBM Z and Cloud Modernization Stack.
- Enhanced the IBM Z Development and Test Environment by designing and implementing automated end-to-end (E2E) and API tests using Selenium and qTest.
- Contributed to the product license generator to comply with new licensing requirements, expanding available options for licenses.
- Received two commendations for exceptional adaptability and expertise, demonstrating a strong ability to quickly learn and contribute to complex projects.
- Secured second place in the 2021 North America IBM Intern Challenge (Hackathon).

PROJECTS

Zero Knowledge Proof of Location | *Circom2, snarkjs, Solidity, JavaScript/TypeScript*

May 2024

- Researched with Dr. Thierry Sans to design a novel proof-of-location protocol utilizing ZK-SNARKs, ensuring security and user privacy. Demonstrated practicality through implementation and stress testing, showing significant performance improvements over existing works in terms of both time and space complexity.
- Analyzed over 60 scholarly papers to refine understanding of Zero-Knowledge Proofs, Proof of Location, and distributed computing concepts.
- Received the 2023 UTSC CMS Research Symposium Certificate and became a full paper candidate for the ACNS 2025 conference.

NaiveOracle | *Solidity, React, Ethers.js, Hardhat, Waffle, OpenZeppelin, Netlify, Remix, Chai*

November 2022

- Led a team of 3 developers to build a decentralized oracle network inspired by Chainlink's white papers, implementing SLA smart contracts with order-matching, reputation, and aggregation components.
- Developed NaiveTokens (ERC20) to facilitate network transactions and ensure data trustworthiness.
- Built a user-friendly React frontend and local nodes to monitor, receive, and execute user contract orders.

Crowdfunding DApp | *Solidity, Hardhat, React, Ethers.js, MetaMask, OpenZeppelin, Chai, Netlify*

November 2022

- Developed an Ethereum dApp for decentralized fund management with DAO governance via ERC20 token issuance and token-based voting.
- Implemented core functionalities like ETH deposits, proposal creation/voting, and execution of spending requests, ensuring robust contract functionality with Hardhat and Goerli testnet.
- Built a responsive React frontend integrating Ethers.js and MetaMask for seamless blockchain interactions and secure user authentication.

Sosocoin | *Python, JS, Docker, React, Flask*

November 2022

- Engineered a blockchain implementing key Bitcoin concepts such as proof of work and transaction validation, featuring a React frontend, Flask APIs, and Dockerized nodes.
- Developed comprehensive testing protocols for node addition, minting, block creation, synchronization, and adaptive difficulty to enhance network reliability.

UTAP | *React, Node, Express, PostgreSQL, Axios, TS, Python, Docker, GitLab, Cypress, Mocha, Chai* August 2023

- Collaborated with Dr. Bogdan Simion to enhance the UTM Teaching Assistants Application System (UTAP) by improving user experience and optimizing system performance for TA hiring and management. Streamlined administrative processes involving TA applicants, department faculty, and coordinators.
- Revamped the automated TA scheduling system by implementing Constraint Satisfaction Problem (CSP) and Combinatorial Optimization Problem (COP) solvers, eliminating long-standing, intermittent inefficiencies and enhancing the Fall 2023 admissions cycle efficiency.
- Executed full-stack development tasks (RESTful API Design, PostgreSQL integration) and enhanced testing capabilities by expanding automated dataset generation, and deploying Cypress for E2E validation.

Pintos | *C, Perl, x86 Assembly, Docker, Pintos, GCC, GDB, Bochs/QEMU* August 2023

- Directed a team of 3 to overhaul a multi-threaded OS, enhancing threading, user programs, virtual memory, and file systems, securing a 97% project score.
- Developed and optimized a multitasking operating system by implementing advanced scheduling algorithms, system calls for process and file management, virtual memory with demand paging and swap management, and an efficient file system with inode-based structure and caching techniques, significantly enhancing system performance and security.

16-bit MIPS CPU | *Python, Assembly, Verilog, FPGA(Quartus Prime), MIPS Architecture* April 2019

- Designed and developed a 16-bit MIPS CPU on FPGA, utilizing RISC architecture principles to achieve optimized instruction efficiency. Created a custom Python assembler to streamline assembly-to-binary code conversion.
- Engineered an instruction set (33 operations) covering arithmetic, logic, memory access, and control flow operations, enabling the execution of complex computational tasks, including algorithms such as Bubble Sort (iterative) and the Fibonacci sequence (recursive). Implemented a VGA controller, empowering the CPU with real-time graphical output capabilities.
- Authored comprehensive documentation with enhancement outline, which was adopted as a [course resource](#).

B2ST Startup | *React, Node, Express, MongoDB, Docker, Twilio, scikit-learn, Stripe* December 2022
| *Jest, Sentry, Sumo Logic, GitHub Actions, Heroku*

- Initiated a B2B SMS marketing automation SaaS startup, co-led an international team in the DCSIL, engaged with industry leaders at Shopify, Stripe, and TD Bank to gather insights for strategic project enhancements.
- Developed a sales prediction model using Scikit-Learn and integrated it into the MERN stack application to provide efficient promotions for the business, resulting in reduced operational costs and increased customer loyalty.
- Designed microservices architecture featuring 3 backend services: Machine Learning, SMS notifications, and account service with subscription management.
- Strictly followed DevOps practices using GitHub Actions and Sentry, resulting in a code quality rating of A from Code Climate.

scikit-learn Contributions | *Python, Cython, NumPy, SciPy, pytest, GitHub, Agile* May 2021

- Led a team of 6 members in the scikit-learn community, contributing 2 new features and an in-depth analysis of 3 potential bugs to guide future development.

RELEVANT COURSEWORK (4.0/4.0 GPA)

- | | | | |
|---------------------------------|---------------------------|--------------------------|---------------------------|
| • All Calculus Courses | • Engineering Large | • Blockchains and DApps | • UTAP Research Project |
| • Database and Web Applications | Software Systems | • Theory of Computation | • Innovation Lab |
| • Programming on the Web | • Artificial Intelligence | • Algo Design & Analysis | • Business Software |
| | • Computer Graphics | • Computability and | • Geometry Processing |
| | • Research on P2P | Complexity | • Computability and Logic |

TECHNICAL SKILLS

Languages: Go, Haskell, JavaScript, TypeScript, Python, SQL, Solidity, Circom, Assembly, Shell script(sh, bash, zsh).

Frameworks: ReactJS, Node.js, Express.js, OpenZeppelin, Hardhat, Waffle, Ethers.js, snarkjs, Remix, Chai, Mocha.

Tools: GitHub, VS Code, ESLint, Jira, Slack, Docker, macOS, Ubuntu (Linux), Windows, Postman.

Methodologies/Specifications: Agile (Lean, SAFe, Scrum), DevOps, ERC Standards (ERC-20, ERC-721).
